```

github

1)first clone the repo for that ->

git clone repolink

2)to commit

git add .

git commit -m “commit message”

git push

requirements

- Python 3.8+ (recommended 3.10+)

- Ngspice (we use the console binary `ngspice_con.exe` on Windows)

use this link -> https://sourceforge.net/projects/ngspice/#

- Python packages: see `requirements.txt` (install with `pip install -r requirements.txt`)

Requirements
numpy

pandas

matplotlib

scikit-learn

joblib

schemdraw

flask

adding path to system

after downloading ngspice from this link https://sourceforge.net/projects/ngspice/#
>you will get a zip file .extract it .open the bin folder you will find ngspice_con.exe file.copy

the path of bin folder.
>add the path of ngspice_con.exe in environment varibles->user variables-> path->edit->add new-> ok

installing pyspice

pip install pyspice

script for the data set

in src

src/generate_topologyname_dataset_ngspice.py

to run

cd C:\path\to\AI_Circuit_Assistant\src

python generate_topologyname_dataset_ngspice.py

generating scripts

use this chat for making scripts
